Features of QuickBooks 2023 Desktop and MAC

For Desktop

☐ **Intercompany transactions**

Between your many company files, you can send a bill or check. If you have different but affiliated companies that do business with one another, this is helpful.

☐ **Inventory categories**

To keep your inventory organized take your group items into categories. When you run reports you can use categories to get helpful insights about inventory stock.

☐ **Inventory expiration date**

You might choose to include the required expiration dates in your serial or lot numbers. Expiration dates help with sales decisions like discounting things that will expire soon and reducing the risk of selling expired goods.

☐ **Track vehicle mileage**

Using the QuickBooks mobile app you may track the miles you travel for work, then import and approve them in QuickBooks Desktop. So that you have your mileage deductions ready for tax time, you can keep track of your trips and vehicle all year.

☐ **Cash Flow Hub**

[Cash Flow](#) Hub can help in the success of your company. You may learn more about your company's current cash situation using this one-stop shop. It's simple to maintain and enhance your cash flow because you can easily observe the money coming in and going out of your business.

☐ **Payment links**

Send a payment link to quickly collect money for purchases that don't require an invoice.

For Mac Plus

☐ **Pay bills online**

With the help of the [QuickBooks Mac Plus 2023](#) Pay Bills Online feature you can easily schedule and pay your bills online without leaving QuickBooks.

☐ **Upload bills**

Using the iPhone scanner or QuickBooks Photo Sync feature you can now upload a photo of your bill. QuickBooks will match the data to an existing transaction or will create a new one automatically, at the time when a new bill is uploaded.

☐ Customer group reporting

Now, you may run a group with certain criteria, like high-balance customers, and run reports on that group of consumers.

☐ Additional reports

Four new reports were added by QuickBooks Mac Plus 2023 that are adjusting journal entries, profit and loss (P&L) unclassified, unpaid bills by job, and P&L budget performance.

☐ Expanded Photo Sync

Using the Photo Sync feature, you may now include bills and attachments in your company file. Simply add them to a shared Photos album on your computer, and QuickBooks for Mac will quickly import them.

☐ Improved item management

With the ability to change information to the new you can now duplicate existing items as required.

☐ Improved condense facility

More choices for condensing your company file have been included in QuickBooks for Mac 2023, giving you more control over the data you want to condense. For example, you can decide to remove transactions based on dates or audit trail information to date.
